

Project Planning

FitBuddy – AI Fitness Plan Generator using Gemini Models

Project Milestones

Milestone	Activities	Planned Output
1. Model Selection & Architecture	Research model; define architecture; set up environment	Selected Gemini approach and structure
2. Core Functionality	Workout, nutrition, feedback, storage and input processing	Core application functions
3. routes.py Development	Create and connect routes	Operational backend flow
4. Frontend Development	Build UI and Jinja2 templates	Working web interface
5. Deployment	Prepare local environment and verify	Runnable local application

Dependencies

Python environment and packages must be installed.

Gemini API key must be configured.

Frontend templates depend on FastAPI route/context data.

Planned Deliverables

Phase-wise GitHub repository, working application, testing evidence, project documentation and demonstration video.
