

Code-Layout, Readability and Reusability

FitBuddy – AI Fitness Plan Generator using Gemini Models

Project Layout

app/ – Python application modules.

templates/ – Jinja2 HTML templates.

static/images/ – static assets.

requirements.txt – dependencies.

Environment configuration – Gemini API key outside source code.

Module Responsibilities

gemini_generator.py – workout generation.

gemini_flash_generator.py – nutrition/recovery tip.

updated_plan.py – feedback-based update.

database.py – persistence functions.

routes.py – FastAPI route handling.

main.py – application entry point.

Readability and Reuse

Separate AI generation, database, routing and presentation responsibilities.

Reusable functions isolate specific operations.
