

# Project Executable Files

## FitBuddy – AI Fitness Plan Generator using Gemini Models

### Execution Requirements

Python and pip.

Virtual environment.

Required packages.

Google Gemini API key in environment configuration.

### Execution Steps

1. Create/activate virtual environment.
2. Install dependencies.
3. Configure GOOGLE\_API\_KEY.
4. Run `uvicorn app.main:app --reload`.
5. Open `http://127.0.0.1:8000`.
6. Use /docs for API exploration.

### Expected Flow

User input → FastAPI → Gemini → SQLite → Jinja2 result → optional feedback → revised plan.
